

了解狗狗及其需求

GETTING TO KNOW DOGS AND THEIR NEEDS

1

狗狗並不是
根據味道來選擇食物，
而是**根據氣味**

Dogs do not choose
their food according
to taste but
according to smell.

2

大量的食物
到達胃部

Food reaches
the stomach
in large amounts.

3

消化速度較快，
未被吸收的食物會
大量從糞便排出

Digestion is fast
and non-absorbed food
is passed out in the faeces
in large amounts.

狗狗有**42顆牙齒**，
包括12顆門牙、
4顆犬齒和
26顆裂齒
**42 teeth, with
12 incisors,
4 fangs and
26 carnassials**

高度發達的
嗅覺
**A highly
developed
sense of
smell.**

狗狗的**味蕾很少**，
對味道不敏感
**With very few
taste buds, dogs
are not specialists
in taste.**

強大的下顎能
切割食物，但
不具備咀嚼能力
Powerful jaws
that are able to cut,
but not able to chew.

狗狗唾液中的
消化酶很少
(沒有預消化的功能)
**Few digestive
enzymes in canine
saliva (no pre-digestion).**

狗狗的**胃容量**非常大，大型狗的胃
容量可達8升（適合大量進食）

狗狗胃的酸度比人類高得多，有助於
消化骨頭並幫助抵抗有害細菌

A dogs' stomach has a very large
volume, up to 8 litres for very large
dogs (well adapted for large meals).

The acidity of a dog's stomach is much
greater than that of a human. This aids
the digestion of bones and helps to
fight against harmful bacteria that are
sometimes ingested.

儘管大腸（或結腸）較短
（20到80厘米），但消化過程
非常緩慢狗狗的腸道菌群數量
和種類比人類較少，因此多樣化的
飲食並不適合狗狗

Transit in the **large intestine
(or colon)** is very slow, despite
being short (20 to 80cm). The
quantity and diversity of
intestinal flora in dogs are less
than in humans, this is why
varied diets do not suit dogs.

小腸的長度根據狗狗的
大小而異，介於2到6米
之間。食物通過腸道時
間僅需約2小時

The length of the **small
intestine** varies from
between 2 and 6 m,
depending on the size of
the dog. The duration of
the transit is just 2 hours.
